

## 40% less water spillage with AquaGlobe® Bite Ball Valves

- Minimal water spillage
- Anatomical, hygienic
- Reliable self cleaning ball
- High quality materials
- Triple tested

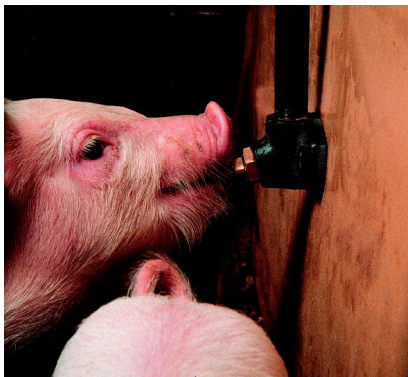

*Optimal drinking capacity while limiting water spillage*

The patented AquaGlobe® Bite Ball Valves offers the water saving advantages of a drinker cup at a fraction of the cost. The positioning of the bite ball on the valve decreases spillage by insuring that the valve is taken fully into the mouth of the animal before the ball can be depressed releasing the water. The guarded design further decreases water waste by preventing spills caused by incidental contact or animals scratching themselves on the valve.

The Bite Ball Valve has been proven to save 30 to 40% of the water spillage compared to conventional valves. There has been two independent university studies proving the same result. The studies were made on finishing pigs.

The Bite Ball Valves are available for pigs and cattle in different sizes.

*AquaGlobe® is animal friendly*

*Less spillage will reduce wastage output*
