

## DRINKING CUP PROGRAM

### **5000-100 TRAINER SET PIGLETS R 1/2" - HP - SS - P**

It is very important for the nursery piglets to locate and start to drink water at an early stage. For this purpose, AquaGlobe has developed a piglet trainer set. The valve has a screw that can be set to drip. The dripping attracts the curious animals to locate the water source. The water drops are collected on a small plate where the piglets can drink the water from an open water surface. The plate has a drainage that can be connected. When the animals know where the water is, the dripping can be turned off. All parts are made from high grade stainless steel and the pipe threads are the common 1/2" size.

### **5010-100 DRINKING CUP PIGLETS R 1/2" HP - SS - P**

The drinking cup for piglets is designed to fit even the smallest piglets with a unique piglet valve and a shallow cup. The piglet valve has a small spindle and the spring is soft for the piglets. Very little force is needed for the smallest piglets to open the valve and release the water. The shallow cup is hygienic. The accessible water surface attracts the piglets to the cup faster. All parts are made from high grade stainless steel and the pipe threads are the common 1/2" size.
