

DRINKING BOWL FOR CALVES AND SOWS

- **Unique servo valve – extremely easy to open**
- **Slight touch – very high flow**
- **Hygienic – no levers**
- **All stainless steel**

The AquaGlobe drinking bowl for calves and sows is made in all stainless steel. The bowl has a unique valve with servo design. The servo valve is extremely easy to open.

With this new valve, there is no need for a lever to help the animal operate a high flow. With just a slight touch the animal can release a very high flow of water.

Without a lever the bowl is more hygienic. All surfaces are accessible to the animal which results in less bacteria. Fewer moving parts also makes the operation more reliable.
