Servo spray valve

3/4" - 15 l/min

4120-100

Servo spray valve

1" - 22 l/min

4130-100

- **Unique servo spray valve – extremely easy to open**
- **Slight touch – very high flow**
- **Hygienic – no levers**
- **All stainless steel**

The AquaGlobe servo spray valves are made in all stainless steel. The valves have a unique servo design. The servo valve is extremely easy to open. It can be used in troughs and bowls.

With these new valves, there are no need for a lever to help the animal operate a high flow. With just a slight touch the animal can release a very high flow of water.

Without a lever the troughs and bowls are more hygienic. All surfaces are accessible to the animal which results in less bacteria. Fewer moving parts also makes the operation more reliable.
